

## **SIMPLE**

### **The BrightStrand International Managed Password and Logon Environment for hp NonStop™ Server Environments.**

Security procedures and often audit requirements state that privileged passwords are retained securely until required. Typically this requirement is for exceptional circumstances and often at short notice. BrightStrand International has developed a NonStop™ utility to make management of privileged user ids simpler. This utility removes the need for any person other than the one logging onto the sensitive user id to know the password for that user id and allows the security departments of organisations to manage these passwords without knowing any technical details or to have experience on the NonStop™ Servers.

The **SIMPLE** utility offers the following key features:

- Centralised management by security administrator(s) for authorising password requests.
- A password generator which provides a single use 8 character random password known only to the requestor.
- Password time lapse and usage control.
- Password quality control on generated passwords
- Automatic timeout if password is not used.
- Used primarily for privileged Userids/passwords, but not restricted to them.
- Full audit to include password requests, usage and illegal events.
- Compatible with Safeguard and all major third party NonStop™ security products.
